Figure 1: Trends of the 4 Major Common Communicable Disease by Month – 2018
Figure 2: Case Counts of the 4 Major Communicable Diseases and the Incidence (per 10,000 population) by Atoll – May 2018

Blue represents the number of total cases reported in the month June 2018.

Red line represents the average incidence rate, that is the number of new cases reported by atolls in the same month of the previous year’s, in proportion to every 10,000 populations.

Average incidence rate is calculated, (Average incidence = Average of new cases in the same month of previous year’s x 10,000)
